-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

1. This action is in response to applicant's RCE received on July 6th, 2008.

Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: claim 6 recites the phrase "leakage passage," which is not in the disclosure.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-2 and 4-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Wolfer et al (5,566,771).

Wolfer discloses the same invention including a hammer-piston 9, a drill bit 84 having an upper end 96, a chuck 80, an air cushion (formed by chamber 13) at a position when the drill bit 84 has been moved past a predetermined distance in a percussion direction (see Fig. 6). The drill bit 84 is sealingly slidably supported in a drill bit bushing 88. The air cushion forms a sealed air volume defined between upper end 96 of the drill bit 84, the hammer end 34 of the hammer-piston 9, and laterally by the

drill bit bushing 88. Note that the air cushion is capable of reducing the percussion power, as it aids in returning the piston to an initial position. The drill bit bushing 88 and a hammer piston chamber is supported by a housing 7. A leakage passage 114 allows pressure-air to leak past the driving device in advanced positions in the percussion direction. The hammer-piston 9 has a central axial channel 44 and continues in the drill bit (bore 86) over a foot valve 98. The air cushion is limited by an outside surface of the foot valve 98.

Response to Arguments

5. Applicant's arguments with respect to Shaw have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to LINDSAY M. LOW whose telephone number is (571)272-1196. The examiner can normally be reached on Monday thru Friday 7:30 to 5:00.
7. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
